The Automated DR Module

What is Ziphany's Auto-DR?

An add-on ZDRP module, designed to facilitate the operations of the Aggregator or Utility in order to improve the controls and management of their Auto-DR efforts.

With open and custom protocols combined with cutting-edge, cost effective hardware options, Ziphany delivers a variety of control solutions to meet the industry's needs.

How is it changing the way we "do" DR?

Historically, DR has successfully reduced demand at key times benefiting many grid systems. But, this has been a mostly manual process and is now being challenged in light of growing sophistication of customers, facilities and equipment. The necessary infrastructure is increasingly accessible and new opportunities for Auto DR are ripe.

Start My Auto-DR Benefits Now!

With Ziphany, when an event is called, execution is as simple as pressing "Start." With Ziphany's control capabilities, you'll enjoy:

- A stable, responsive control platform
- Fast-to-market customization
- Site-specific, preprogrammed curtailment plans
- A hardware-neutral staff with M2M expertise
- Install Project Management

...and your operation will improve with:

- Short Response Times
- Reliable Performance – *Watch the Drop!*
- Lower Admin Costs
- New, Lucrative Opportunities

New Opportunities

Reducing response times to event triggers enables participation in emerging opportunities, including:

- Price responsive markets
- Robust ancillary programs
- Energy efficiency (EE) incentives

Why Auto-DR?

- Shorter Response Times
- Increased Performance Reliability
- Lowered Administration Costs

Whatever your DR needs, talk to Ziphany today to learn how to overcome your system obstacles.

Ziphany was named to the top 100 M2M Companies for 2007.
